From HOD's Desk

Message

I am truly elated and indeed it is a matter of pleasure for me to unveil the Volume-2 of our department magazine **AABSHAAR** (*The Sign of Peace*). I assert that this magazine will co-relate with its name. Since past few years it has been a continuous and massive process to lionize the ponderous efforts, where we can make every one learn and grow with us in the department. Being the HOD, it is an indispensable responsibility to take all those endeavors at its pinnacle and hopefully this magazine will be its epitome. I bestow my heartfelt gratitude to every student and faculty member who made this possible. I wish to get more sharp minds to get connected with us. All the best for future perspectives.

Dr. Sanjay Gairola

HOD, EE Department

Galgotias College of Engineering & Technology

From Chief Editor's Pen

"Where reason fails, with all powers

The faith prevails and love adores"

"Doing the best at this moment

Puts you in the Best for the next moment "

Dear Readers,

I am proud to say that our Department Magazine **AABSHAAR** (*The Sign of Peace*) is an outcome of hard work of credential people.

It is an anuciation that our department has a collection of versatile people who have an acuity acumen to speak about the prevalent issues of the society. We believe readers, invigorated after reading these articles. The articles strike a propinquity in dealing with sensitive and unique ideas.

A magazine provides an opportunity for such amateur writers to take to the pen and showcase their creativity. They can dwell at length on the social issues that concern a commoner and provoke a thought process that may lead to a resolution. This also provides an opportunity to the budding writers to get their writ-ups/contributions/literary pieces weighed by the experts that may help them fine tune or chisel-out for more refined contributions.

The Editorial Board thanks the members for their meritorious and sincere effort into bringing out the magazine.

SHAH HUSSAIN

Chief Editor: AABSHAAR

B.Tech EE - III Year

VISION OF THE DEPARTMENT

- *To become a pioneer department in producing competent, innovative and socially responsible electrical engineers.*

MISSION OF THE DEPARTMENT

- *To provide quality education through continuous upgradation of facilities and mentoring conducive to the department.*
- *To promote research and innovative practices focusing on the needs of industry.*
- *To transform students into socially cognizant professionals and entrepreneurs with amicable interpersonal and communication skills.*

PROGRAM EDUCATIONAL OBJECTIVES

- *Exhibit technical competence in Electrical Engineering and allied fields and attain feasible solutions best suited to the industry needs.*
- *Adapt to latest global technologies and optimally utilize resources to develop and create solutions for engineering problems.*
- *Perform as skilled professionals and entrepreneurs through good communication skills and ethics.*

ABOUT AABSHAAR

AABSHAR is an Urdu word which means 'Waterfall' which is also termed as 'Sign of Peace'.

The name to the magazine was suggested by me, the present chief editor of the magazine Shah Hussain.

The name was suggested because the magazine is the only platform where we students from different mindset, work together to showcase our views and talent which in itself creates peace & harmony. At this platform students work together for the betterment of a single cause. This creates unity among students, which is another benefit of the magazine.

As a chief editor I am very thankful to the students who worked for the magazine and I hope in future the love for the magazine will remain same.

Thank You,

SHAH HUSSAIN
Chief Editor: AABSHAAR

IMPORTANCE OF ELECTRICAL ENGINEERING

SWATI GUPTA

B.Tech EE- III Year

Electricity plays an important and necessary role in all activities of modern life today. The power sector is so large that it has diversified into sectors such as industry, electricity, electronics, and mechanics. It also plays an important role in the overall operation of the entire power system.

As you know, the electricity industry is involved in solving the problem of power transmission and distribution in a vast network. Our life would be unthinkable without the use of electrical energy. The growing utilization of the latter is a decisive prerequisite for a rapid development of industry and agriculture.

A few examples will show the importance of electrical energy. Thus, electrical lighting is indispensable for working during the dark hours of the day. With increasing industrialization, a growing proportion of electrical energy is used for the lighting of shops, offices, dwellings and for outdoor lighting. Man is relieved from heavy physical labour by the use of electrical devices. The drive of machines, hoisting gear and lifts is enabled in a simple form by the electromotor which in railway transport also has the advantage over internal combustion engines. There are many buildings where an air-conditioning system including heating, cooling and ventilation is installed for the operation of which electrical energy is required. At higher ambient temperatures, foodstuffs can only be kept for a prolonged period of time in refrigerators or cold-storage rooms which usually are also operated with electrical energy.

Without electrical energy, there would be no broadcasting and television systems, no telephone communication or telegraphy. In order to arrange automatic sequences of operation in production, devices of control and regulation engineering are required which, today, are driven almost exclusively by electrical energy.

The consumption of electrical energy by the various branches of economy is quite different. The chemical industry and metallurgy have a particularly high consumption. For the production of the electrical conductor materials electrolytic copper and aluminum, very large amounts of electrical energy are required.

In industrial countries, the consumption of electrical energy increases by 4% to 7% per year. For this purpose, considerable amounts of primary energy carriers such as coal, petroleum or natural gas must be provided. All over the world, a reduction of the

resources of primary energy carriers takes place. At the same time, their prices have been increased continuously. Water power is not in all countries available to a sufficient degree.

The initial cost for the construction of a hydroelectric power station by far exceeds the initial cost of a thermal power station.

According to the present developmental stage of engineering, nuclear power stations represent not yet a final solution of the problem. Therefore, it is absolutely necessary to use electrical energy sparingly. This also means that such devices and installations have to be developed and used which ensure a high net efficiency with as small a consumption of electrical energy as possible.

Finally, mention should be made of the fact that electrical energy can be transported conveniently through large distances at low losses. On the other hand, there is the disadvantage that electrical energy can be stored only in small amounts at high cost. Production and consumption must take place largely at the same time.

MORAL EDUCATION

SHAH HUSSAIN
B.Tech EE- III Year

We are living in a digital world where anything can be had in a real time nick of by just pressing the button of a computer or cell phone. The strides that man made in technology are simply awesome. Education has become quite simple and accessible. We need not to carry books or pursue pages anymore for fetching any information as digitalization has made information readily available. Having this technology perse is not the panacea.

Education without morality is like a body without soul. The relevance of class teaching is more in contemporary times than what it was in the past keeping the availability of information in view. We live in a society which is still in evolution & it is not mature enough to accommodate any change comfortably what we witness daily is the result of erosion of moral values. Our society in particular intact to have values like humanity, humility, empathy, compassion, respect for the elders/parents and teachers, togetherness and what not and because of these values our society was unique. However, our value system is vanishing at a faster rate and if corrective measures are not set in place, this society is bound to disintegrate and crime is going to be the order of the day. What we witness today that a student does not care to respect his teachers any more. Elders are being humiliated and parents do not have any control on their children. The erosion of value system is attributed to two things the political instability and the witnessing for the last 30 years and the second reason is the break down of education system, while the first can not be controlled, educational system has to play a major role to save this society. The education system needs to be revamped in such a way to incorporate the age-old moral values in it. Educationists, policy makers, intellectuals and renowned citizens must sit together and ponder over to address the issues lest it is too late.

Teachers, parents and society at large have to play a major role to shape(mould) the future of this nation otherwise no one can stop our doom.

At the end I want to quote a Hadith from Sahi Bukhari narrated by Hazrat Ali (RA)

**“I am slave to that person who taught me a single word.
He may sell me or set me free”**

REMINISCENCES - HUMANITY NEVER PERISHES

SHAH HUSSAIN

B.Tech EE- III Year

A famous quote goes as, " When we are children we seldom think of the future. This innocence leave us free to enjoy ourselves as few adults can. The day we fret about the future is the day we leave our childhood behind."

Childhood memories are always mesmerizing and the school days add spice to those memories. No matter how far we fly the roots will remain intact. I feel privileged to have my childhood memories associated to a place which is undoubtedly the paradise on earth. Recalling my childhood memories I could even now feel the fragrance of such a beautiful land my own motherland which always prompt me to believe that we are the blessed children of Almighty. We have been blessed to have a beautiful motherland called Kashmir. Islamia Hanfia Institute, Anantnag is the iconic institution. In the first decade of 21st century where I started the real meaning of humanity beyond any malice or adulteration as we were taught Kashmariat.

Now in present, outside my motherland at my Engineering College being a Kashmiri student has never been treated different as all my friends are non - Muslims and we hardly ever kept any such thing in our mind that the present world gets tangled to. I have sweet memories of twelve years of schooling and three years in this amazing institution. There is love, respect and happiness all around. The teachers are pious souls and believe me ultimately it is the humanity that we learn from school that counts than the academics. No doubt we live in a materialistic world but the humanity keeps us grounded beyond any doubts. When we grow up we are polluted by the thoughts which force us to get associated with political affiliations but the thought of our childhood and college memories make us realize the real meaning of peace. There are misconceptions everywhere, sometimes we get judgemental or out of emotions and thus hate people without realizing that we need to connect first then decide. No one is bad or good. We all have a soul and the day we realize our soul, we always get peace. As kashmiries, we have a great role to play to spread peace and happiness in our valley. Our future generations should be blessed souls and create a message throughout the world that the Paradise is here only and will remain so for ever.

Ameen

ROLE OF PARENTS IN UPBRINGING OF THEIR CHILDREN

SHAH HUSSAIN

B.Tech EE- III Year

Parents play a significant role in a upbringing of a child. They confront a great deal of suffering for the prosperous future of their child. The hardships faced by the parents are unknown to the child. The child is completely unaware of the pain in which his mother indulge during his birth and later, while feeding him. The hard work of father for his sustenance is never revealed to his child. This affection of parent is quite appreciable. The rights of parents have been revealed even in Holy Quran, when Allah(SWT) says, "Your God has decreed that thou shalt worship only Him and adopt good behavior with (thy) parents" (Quran,17:23). But the duties of parents do not end up at providing only bread and butter to the child. There comes a lot of responsibilities with the child and a parent who holds back from these responsibilities is found in trouble, both in this world and the word hereafter. The Prophet Muhammad (SAW) has said, "As your father has a right over you, so does your progeny have a similar right". And, "As the children disinherited for their disobedience, so also it is possible that the parents may be disowned by the children for not fulfilling their bonding duties."

The most important duty of a parent is to make his child a righteous, religious, just and a responsible person. The parents need to take concern in the well-breeding of their child. They are an essential key for the virtue of their child. But unfortunately, many children are deprived of this care of their parents. Nowadays, many parents admit their children in best of the city schools for the academic success of their kids. This is the point where they start neglecting their children. They place their children in the hands of teachers and forget about their responsibility and duties. They feel that the conduct and the future of their children completely depends on the teacher and as such, they are free from the trouble of their upbringing. This negligence of the parents results in an unhappy and uncooperative child. Like a parent wants his child to be obedient, so does the child wants his parents to be loving and polite. Often a parent is found unaware of all the trauma, that his child is going through, which even worsens the problem with his child. "His child can become both happy and successful, when he provides full support and love to him". With the trouble of feeding, the parent needs to take the trouble of spending time with his child, share his joy and sorrow and at the same time, teach him religious, just and rightful life. Like a child is inspired with the stories of successful people, so should the parents be inspired with the story of the caring and supportive parents.

A child cannot say what he feels, but his feelings are reflected in his eyes but it is a parent who can best study those eyes and thus shield him from the sorrow of the world. Parents need to be very very concerned for their child, not only in terms of their academic success but in terms of their happiness and their conduct also. I cannot teach parents, Parenthood. It is far beyond my capacitance. But I can only make the modern day parents aware of their negligence. At last, I request parents to spend time with their children, share experience with them and have live interaction with them. Do all this out of love, "For child does not need mere a family, but a loving and supportive family".

SELF CONTROL- IMPORTANT TO BE SUCCESSFUL

Vishvapriya Gaur
B.Tech EE- III Year

Self Control is the ability to control the emotions and behaviour especially for attempting wrong doings which can become the critical obstacles towards your success and takes you miles away from it.

As self control is necessary in every one life to be a successful person but it is more mandatory in students life at this stage if student loose the self control on its own can destroy the future and it take few time to trash all the dreams, aims or goals of the life. Lets take an illustration, think that if one guy joined a gym and he decided to make his good physic and spending around 6 hrs for workout in gym and following all rules and regulation strictly of his diet, exercise and all as directed by his trainer or mentor can get good physic but on the other hand one guy started workout in gym and not following the instructions as directed by his trainer so how he can get the good physic as the other one who devoted all his dedication to making his personality so it's all about self control on mind to achieve something. This law of self control is also applied on student also as how much he focused and concentrated on his studied can aggregate good marks while other one who has no self control on its own and wasting his time on social networking, watching porn videos and indulged in odd activities i.e. Alcohol, Drugs and many more.

When it comes to self-control, it is so easy to focus on our failures that our successes tend to pale in comparison. And why shouldn't they? Self-control is an effort that's intended to help achieve a goal. Failing to control yourself is just that—a failure.

How to develop self-control?

The important and difficult task that how to develop and bring in daily routine to boost up the self-control. Here are few simple ways to develop self-control:-

- **Mediate:-** Meditation is the best habit to develop self-control as it trains the brain to increase self-control and it also increase emotional intelligence simple techniques which involves taking as little as five minutes a day to focus on nothing more than your breathing and your senses, improves your self-awareness and your brain's ability to resist destructive impulses.
- **Exercise:-** Exercise is the another way to develop self-control as it relax the mind and keep you away from stress and also helps to quit the habit of smoking and drinking and keep you all day fresh and energetic.
- **Feel the wave:-** Desire has a strong tendency to ebb and flow like the tide. When the impulse you need to control is strong, waiting out this wave of desire is usually enough to keep yourself in control.

The important thing to remember is you have to give these strategies the opportunity to work. This means recognizing the moments where you are struggling with self-control and, rather than giving in to impulse reaction keep calm and develop self control!

ARE WE READY FOR IT?

Vishvapriya Gaur
B.Tech EE- III Year

So, after a long year with lots of mistake, with a small sachet of success, and with a heavy basket of failures (I think most of us have this same scenario for this year, some may better than this or some may have even worse than this), although we had started this year with some new year resolution but, then also most of us think we achieved nothing in this year.

But, just see our determination and dedication that, we again make some new year resolution in the last 10 or 15 days December and we are again ready for a new year with new plans, new stamina, new motivation that we got from last year, to make our life a beautiful one with our hard work and to achieve the word called 'SUCCESS'. I like this attitude, actually I love it that we are focusing on future by forgetting what we have done in past, and each and everyone should have this approach to become successful in life.

But, the problem is that, as we started the this year with so called new stamina and motivation Is it the same for the full year or we have just lost in period I think 30 days or let me extend the period 30 more days or up to the end of February. I think this period is a healthy period for most of us to get back on our old track or into that old comfort zone and, the cycle continues.

Now I have a question, Did we start this year for this day that "1 day will come and i will again forget my dreams and plans".....DID WE?? the simple answer is – No.. A BIG "NOOOO" then why we have created the same situation. For this we need to give more attention to our dreams, more focused to our plans. We have already started the journey by making the resolutions which are beneficial for us all we need to do is just

don't break the cycle in the middle, just go with plans and be focused on goals, so that we can become what we want or in other words "A SUCCESS FULL PERSON". And these capitalized word will come true with the whole cycle . We need to see what we give for success not what we get from it.

So , Let's make another resolution this year and that resolution is that **"WE WILL CARRY ON OUR ALL NEW YEAR RESOLUTIONS DURING WHOLE YEAR"**. So let the journey begin and be continued till the goal is reached.

STEP OUT FROM COMFORT ZONE AND ACHIEVE SUCCESS.

Vishvapriya Gaur
B.Tech EE- III Year

Great Things never come from comfort zone.

It was well quoted, "You can only grow if you are willing to feel uncomfortable when you try something new". Great things never come from comfort zone as successful persons didn't get success from comfort zone. It is true that everyone wants to live a luxurious life but for achieving a luxurious lifestyle you have to burn like the sun if you wanted to be like it as quoted by Indian Scientist and Former president Late A.P.J. Abdul Kalam. If you are living an ordinary life try to make it extraordinary, if you are dreaming extensively try to make it a reality. If you want to be a successful person in life then you have to leave your comfort zone as all the time the ball will be not in your court so if you want the ball in your court you have to work hard and struggle to grab or to achieve it. Success stories are good to read for motivation and for the inspiration too with a positive attitude but try to make it your own successful story so that others will get inspired from your story. If you have the spark and dedication to do something good in life you can achieve but without the luxuries. If you have the urge to become successful in life you have to push your limit and step out from your environment or from your biggest weakness that is comfort zone (as most of us think comfort zone is their strength). Self Dependency is the best ornament in one's life, it always gives happiness which makes the life smooth and peaceful which also rewards you a pleasure and keeps you miles away from encroachment from others as nobody gets success on being depended on others. Sacrifice is very important to achieve something in life without it nothing can be gained our soldiers who are sacrificing whole life all comforts their

families for the nation selflessly. Soldiers are the great inspiration as they are living in adverse condition and they are focusing on their work not on comforts luxuries and all they know if they start thinking about their comforts they can loose concentration from their work.

HOW TO COME OUT FROM COMFORT ZONE?

Its true to achieve something the most important step is the first step as journey of thousand miles starts with a single step. So lets see how to come out from comfort zone.

- At initial phase you feel difficulties to move on without comforts so don't be discouraged.
- Keep Patience as it takes time to settle or adjust with.
- Don't afraid of failures as "There are lots of unsuccessful year behind every success person".
- Try to solve problems of your own which helps you to build confidence.
- Be creative.
- Be concentrated on your work try to ignore distractions.
- Don't be serious at the time of your work but be sincere.
- Don't Take work as load take it as a fun.
- Do exercise regularly.
- Talk to yourself daily which helps for self evaluation.

Ask three question yourself daily :-

- I. Who are you?
- II. What are you doing?
- III. Why are you doing?

Conclusion:-

Step it out and make the blast of your success and make your dreams comes true. Comfort zone is the best place but nothing grows there as most of the peoples in today's world is like the frog in the well. So leave the comfort zone and achieve the success.

OBSERVE, THINK AND ACT:-BEST WAY TO DEVELOP.

Vishvapriya Gaur
B.Tech EE- III Year

Sometimes most of us don't think before act then the only option left behind is regret.

It was well quoted, "Think twice before speak." As speaking without thinking can takes lots of misconception in life which takes too much time to resolve the matter. Observation is the symbol of smartness it is very important to achieve something in life if an individual is a good observer can overcome from any obstacles or can cross any hurdles in life. Along with a good observer envision or think on that observation also matters to defeat in every phase of life and after being a good observer and a good thinker the most important feature is the way of act after being observing and thinking in every phase of life from the competitive exams to relationship. Let's take an illustration, if an individual is good at logical reasoning and he observe well in it and think over it and act well according on its observation so he will get outcome or result based on its observation and thinking and he will get an outcome may be positive based on its observation and thinking and he will act according to it. Sometimes acting without thinking and observing can hurt the relation and even take to end of the relationship but a good observer only act according to the situation he will thought about the upcoming outcome what can it will be. Keep your wits open! Observe! Study! But above all think! Think! and when a noble image is indelibly impressed upon the mind then act on it. Sometimes most of us don't think before act then the only option left behind over the mess is regret only regret. Today's generation problem is that are not understand and not even wanted to listen of their elder ones because they thought they are cool and they know everything also they don't wanted to listen the scolds of their parents as these stuff comes against their ego and sometimes they act without thinking they doesn't think that what their companion will feel. An idioms was well said it was stated as, "मुहं से निकले हुए शब्द और बन्दुक से निकली गोली कभी वापिस नहीं आती."

Positive Mental Attitude:-

Positive Mental Attitude is very important factor in everyone's life to handle the pressure because positive attitude helps to keep motivated and helps to keep away from the negative thoughts pressure can knock the door of the life at anytime and anywhere, so post preparation is very must it can be possible by positive attitude as it gives energy to fight or to handle it. Situational awareness basic and a survivor's mindset enables you to cope effectively. There are four ways to cope up with.

- Stop:- Calm down and size up your situation.
- Think:- Anticipate which hazards are most likely.
- Observe:- Orient yourself to your surroundings.
- Act:- Evaluate progress and go on.

Human Behavior and Reflector:-

Human behavior is the responses of individuals or groups of humans to internal and external stimuli. It refers to the array of every physical action and observable emotion associated with individuals, as well as the human race. While specific traits of one's personality and temperament may be more consistent, other behaviors will change as one moves from birth through adulthood. In addition to being dictated by age and genetics, behavior, driven in part by thoughts and feelings. Reflectors of human behavior reflects the personality mental ability and character of human being some of the reflectors are listed below.

- Stand back and observe different perspectives.
- Think first act later-often much later.
- Enjoy observing others and listen before making a point.
- Always take a wider picture.
- Take the back seat.

Conclusion:-

Don't make others suffer from your senseless reaction of any conservation in any situation think twice before speak or act. Without trying to change the way you're walking, simply observe how it feels. Just take a moment to observe it and to act it, just sit back and observe the more you learn that way.

ISKCON TEMPLE

Rajan Keshari
B.Tech EE- II Year

The International Society for Krishna Consciousness (ISKCON), known colloquially as HARE KRISHNA movement. ISKCON is founded in 1966 in New York City by A.C. Bhakti Vedanta Swami Prabhupada known to his followers as Guru and Spiritual master. Its core beliefs are said to be based on Bhagavad Gita and Bhagavad Puran, which has had adherents in India since the late 15th century and American and European converts since the early 1900s in North American. In west Virginia, the Prabhupada is place of gold is now a Shrine for the founder, who died in 1977.

Food for life:

ISKCON founded a project called Food for life, which it has also sponsored in the past the goal of the project is to distribute vegetarian meals. The international headquarters known as food for life, established by Paul Rodney turner and Mukunda Goswami coordinates the project. Food for life is currently active in over 60 countries and serves up to 2 million free meals every day.

Advantages of being an ISKCON devotee:

- You will always be sure confident that Krishna will protect you always.
- Don't worry about depression, Krishna kirtan are immediate.
- You will never be disappointed.
- She helps you to grow materially spiritually.
- All are equal highly intelligent, even trees grants your wishes.
- You can know the truth behind your birth secret behind the death that's a surprise.
- Lord of death will be scared to come near you, Krishna will send his personal manager to bring you back home.
- He promises to give knowledge about him if you just will for it.
- You don't need a Hindu, Muslim, and Christian, rich, powerful all you need is love for him a will to understand him.
- Krishna is always thinking about you just turn back to lord.

On 26th February 2019 the Prime Minister Narendra Modi inaugurated the worlds largest and heaviest Bhagwat Geeta at the Delhi ISKCON temple. As per ISKCON the holy book measuring 2.8 meters by 2 meters has 670 pages and weight at 800kg.it is also the world largest sacred book.

“Chanting HARE KRISHNA MAHAMANTRA is the noblest work. You will get the ultimate place and happiness by spreading the word of Sri Krishna using Bhagwad Geeta as it is”

HARE KRISHNA HARE KRISHNA, KRISHNA KRISHNA HARE HARE||
HARE RAMA HARE RAMA, RAMA RAMA HARE HARE||

Things get unfolded every day,
Leaving me at six and sevens,
Twisting me hard, beyond limits,
Tearing me apart into pieces,
Friends turning into acquaintances,
Love on the verge of death,
Life, lost in abyss,
People suggesting me; to count my blessings,
To take leap of faith,
Every step on these paths have deceivers,
No one to blame but my altruistic being,
Lying on my bed scrolling down memes,
Reading jaun, writing pessimism,
Trying to run; from depression,
From regret of being benevolent,
Because new things get unfolded every day,
Leaving me at six and sevens.

Na Jane Kyun Ye Dil Aaj Phir Tadap Utha

***Na jane kyun ye Dil aaj phir tadap utha
Teri yaadon se, Tere un adhoore Waadun se
Tere saath sajaaye un adhoore Badnaseeb Khwaabon se***

***Mere Tasavur mein, Meri Rooh pe
Na jane kaisa ye Shola Sulag utha
Na jane kyun ye Dil aaj phir Tadap utha***

***Na Tere Deed ke Qaabil hoon
Na Tumhari Khoobsurat Yaadon mein kahin
Shaamil hoon***

***Hoon to mai Naseeb ka Khota
Phir bhi hamesha teri Chahat ka Qaa'il hoon***

***Samreen Hamare adhoore jazbaaton ka,
Hamare toote Khwaabon ka
Mere Seene pe
Aaj na jane kaisa ye Shola sulag utha
Na jane kyun ye Dil aaj phir Tadap utha...!!!***

SHAH HUSSAIN

EE- III Year

Definition of Time

Rajan Keshari
B.Tech EE- II Year

*Time is slow when you wait.
Time is fast when you are late.
Time is deadly when you are sad.
Time is short when you are happy.
Time is endless when you are in pain.
Time is long when you feel bored every time.
Time is determined by your feelings and your psychological
conditions and not my clocks.*

Zindagi

*Jiyo itna ki zindagi kam pdd jaye,
haso itna ki rona mushkil ho jaaye,
Kisi ko paana toh kismat ki baat hai,
magar use chaho itna ki khuda dene pe majboor ho jaaye.*

Pyaar ko

*Pyaar ko tab tkk pyaar na karo
Jab tak pyar aapse pyaar na kare,
Aur jab pyaar aapse pyaar kare, toh
Pyaar ko itna pyaar karo ki pyaar
Kisi aur se pyaar na kare.*

JAB COLLEGE ME AANA THA

Archana Yadav
B.Tech EE- II Year

Baat us samay ki hai,
Jab college me aana tha,
Board ke result ke bad,
Kisi college to jana tha,
IIT aur NIT ke sadme ke mare,
Fir hua AKTU ki counseling ,
Aur hum ho gaye galgotia k hawale,
College jane ki jab bari aayi,
Chinta ke mare dil bhar aayi,
Soch uthi engineering me admission
Leke kahi bhul to nahi kar aayi,
Mujhe dar dar nahi bhatakna tha so padhna tha,
Mujhe apne pairo par chlna tha so padhna tha,
Mujhe apne dar se ladna tha so padhna tha,
Bat us samay ki hai
Jab college me aana tha,
Har chehra tha naya
Aur har shaks tha anjan,
Jab soch hi liya
Is bhid me banani hai apni pahchan,
Kas jindagi ek kitab hoti
To kas leti iski lagam,
Safar me dhup to hogi

Par mujhe chalna to hoga,
Sabhi hai bhid me
Lekin aage nikalna to hoga,
Kisi ke waaste rahein kaha badalti hai,
Yahi jindagi hai kuch khwab chand ummidein,
Wakt se aankhein churakar aage nikalna to hoga,
Mujhe sab kuch hi to badalna hai, so padhna tha
Baat us samay ki jab college me aana tha,
Socha na tha, wo pal jab college me aaye the,
Yuhi kuch pal me ek sal gujar jaenge,
Wakt bhi humare liye kaha thahar jaenge,
Dosto ki masti party assignment sessional se lekar,
Semester tak ka safar suahan hai,
Sikha bhut hai maine, par
Abhi bhut kuch sikhana hai,
Ab to hue senior,
Junior hona to gujra jamana tha,
Yad hai wo samay, jab college me aana tha...

Major Events Organized by the Department

CULTURAL ACTIVITIES

CULTURAL ACTIVITIES

E-TARANG - ANNUAL DEPARTMENTAL FEST

THE DEPARTMENT CELEBRATED ITS ANNUAL CULTURAL FEST **E-TARANG** WITH FULL VIGOUR AND ZEAL.

THE EVENT WAS ORGANISED BY THE DEPARTMENT CLUB **EESA** AND THE HEAD OF THE DEPARTMENT MR. **SANJAY GAIROLA**.

THE ASTOUNDING PERFORMANCES BY THE STUDENTS, SCINTILLATING DANCE, MELLODIOUS SONGS, HEARTTHROBING DRAMA AND VIVACIOUS POETRY FILLED THE AURA WITH ZEST AND FERVOUR.

NANO - SOLAR CELLS

KISHAN PRAJAPATI
B.TECH EE- III YEAR

Now a days with growing population ,the energy demand is increasing day by day.We have the present energy resources are fossil fuels such as coal ,oils and nuclear fuels but even this stock may not longer than a few decades.

So what is our future energy sources?

Renewable energy sources are freely available on the earth in abundant quantity and which will not finish. Thus the energy contained by these sources in any form can be converted to electrical energy which is essential for human.

What is solar energy?

- Energy produced by sun
- Clean renewable source of energy
- Harnessed by solar collection methods such as solar cells
- Converted into usable energy such as electricity

WHY SOLAR ?

We humans currently use about 16 TW of energy in a year.The energy from the sun strikes to the earth is roughly 1,80,000 TW.Even though we can never hope to convert all of that energy to electricity .Practically we might be able to abstract about 600 TW using solar cells.

Different kinds of solar cells:-

Monocrystalline: Made of single crystalline silicon of high purity. Efficiency: 15-17%

Polycrystalline: Made up polycrystalline silicon. Efficiency: 13-15%

Thin film: Made of several layer semiconductor material. Efficiency: 12-15%

DRAWBACK OF SOLAR PV CELLS:-

- Less efficient and high manufacturing cost
- Like chloroplast in plant, solar cells can only absorb the specific wavelength of light
- Payback period is more
- Extra energy is wasted in heat form
- Most times incoming photons or light have less band gap energy Because of less
- Band energy electrons doesn't knock out.
- Manufacturing procedures are complicated by clean rooms and vacuum chambers due to their require purity of the silicon
- Since photovoltaic solar cells are made out of silicon, they are very expensive to manufacture
- As a result the maximum efficiency of any photovoltaic cell is only around 30%, and in practice only 10 to 20 % are achieved

NANO-TECHNOLOGY

- Nano-technology is the engineering of functional systems at the molecular scale.
- Offers better built, longer lasting, cleaner, safer and smarter products for the home, For medicine and for industries for ages.
- We can introduce Nano-technology that is Nano- particles into the solar PV cells.
- It might be able to increase the efficiency of solar cells, but the most promising application of Nano-technology is the reduction of manufacturing cost. These properties of Nano-technology have been made use of in solar cells more .

SLICED INTO NANO-SCALE

- Diameters from 1 to 50nm
- Nano scale Silicon has a color difference
- Quantum dots
- Nano sized Silicon shows:
- Physical-Very small
- Optical- increases surface area for light absorption
- Electronics properties change

NANO-SOLAR CELL

- Nano coating on the solar cell, which will absorb 60 % more UV & IR rays than that of the silicon cell.
- Due to multiple reflections, the effective optical path for absorption is much larger than the conventional solar cell.
- Due to the light, generated electrons and holes need to travel over a much shorter path and thus recombination losses are greatly reduced.
- The energy band gap of various layers can be made to the desired design value by varying the size of nano particles

Ex- dye synthesized nano solar cell

Dye-Sensitized Cell(DSC)

Nano material used in DSC are:-

- Sensitizers (ex- Dyes ,quantum dots)
- Nano-semiconductors(ex-Tio₂ ,Zno)
- Catalyst (ex-Nano-pt)
- Metallic conductors (ex- Ag , Cu)
- Substrates (ex-plastic or thin layer of glass)

DSC built using nano sized particles which gives:-

- Multiple surface area
- Reduce band gap
- Facilitate the charge extraction
- Provide the excess to hole conductors

COMPARISION:-

PV CELLS	NANO SOLAR CELL
Made of some special material called semiconductor	Constructed using Nano technology
Expensive because of manufacturing process	Cost is less because is less material is used
Requires large space ,efficiency is less	Compact and require less space,Efficiency is more
It wont't under cloudy conditioned	Nano solar cell that turns the suns power into electricity energy even on cloudy days
It cant's harness the sun's invisible infrared rays	It contains the 2 nd generation solar cell that can harness the sun's invisible infrared rays.

ADVANTAGES:-

- Nano solar cell even work on cloudy days, more compact and less bulky
- They are 30% more efficient when compared to traditional one. Relatively inexpensive
- Short return on investment
- We wouldn't have to worry as much about future energy sources
- Increase efficiency of solar cell, by reducing the band gap of solar cells, by generating more charges from a single photon
- They are more effective when compared to the conventional solar cell
